**Guarantee for white PVC compound type 4510 colour 90343**

The colour stability of the finished products made from PVC-U compound for the manufacturing of window profiles is covered by a 10 years guarantee from the delivery date of the pellets in the hereafter defined conditions.

The guarantee contains the stability of the white colour 90343 type 4510 after 10 years external exposure in the zone defined as following. The colour of the products made of the above mentioned type, installed in buildings, will practically remain unchanged in the sense that, per reference to the initial colour, the contrast on the Grey-scale will not be below level 3 according to the test method RAL-GZ 716/1 part 1, for PVC –windows. The measuring of the contrast on the Grey-scale is described in the DIN EN 20105-A03.

The present guarantee will only be valid for defects which are exclusively imputable the above mentioned compound of West-Chemie GmbH & Co. KG. Deficiencies caused by manufacturing conditions of the products are not covered by the guarantee.

The liability of West-Chemie GmbH & Co. KG cannot be engaged for reasons of, for instance:

- Finished products made of partially or totally recycled compound.
- Damage caused by the action of non adapted cleaning products or other non adequate products used in contact with the finished product.
- Damage due to abnormal atmospheric pollution.
- Consequences of abnormal conditions that would also cause damage to any similar material.
- Dust which is easily removable by appropriate cleaning.

In the case of application of the present guarantee, the liability of West-Chemie GmbH & Co. KG versus the injured party is limited to the value of the compound and the extrusion costs of the deficient profiles. The indemnity will only be due in the case that West-Chemie GmbH & Co. KG would not be able to find a solution for restoring the functionality and the aesthetic aspects of the finished products.

Best regards

West-Chemie GmbH & Co.KG
